Crossfuze™

OCTOBER 2026

AUTONOMOUS IT · THE ROAD TO ZERO

How ready are you to let AI act?

From AI capability to trusted autonomy.

Part of Preparing for the Autonomous Enterprise

Crossfuze · ServiceNow Elite Partner

THE PROBLEM

We've invested in AI. Where are the results?

CIO

Pilots never reach production

Platform Owner

Unreliable data limits AI decisions

AI / Knowledge Lead

Knowledge and agents lack clear owners

CISO

Unapproved agents expand risk

Finance / Procurement

Consumption and value remain uncertain

Five leaders. One question. What can you safely hand over?

81% of executives believe more AI is running than they can account for.

ServiceNow with ThoughtLab, October 2026 · 550 executives

69% of organisations suspect or have evidence of prohibited public GenAI use.

Gartner, November 2025 · 302 cybersecurity leaders

FROM AMBITION TO VALUE

How do we turn AI ambition into business value?

THE OPEN QUESTIONS

- ? AI in production
- ? Trusted data
- ? Governed agents
- ? Assist consumption
- ? Measurable outcomes

Prioritise impact

THE AI READINESS ASSESSMENT

WHAT EACH LEADER GAINS

CIO

A clear first AI use case

Platform Owner

Dependable data for action

AI / Knowledge Lead

Owned knowledge and agents

CISO

Permission to act within limits

Finance / Procurement

Modelled usage and business value

AI is the promise. AI readiness makes it real.

THE ROUTE

What does the path to value look like?

Three steps. The first two cost nothing. Each one earns the next.

01 SELF-SERVE TOOLS | About ten minutes

ServiceNow AI Readiness
Are we ready?

ServiceNow Assist Estimator
What might it consume?

02 ASSESS · 90 MINUTES | Clear next steps

The AI Readiness Assessment

- Where you stand
- What needs attention
- What it may consume
- Where to start

90 DAY CYCLES

03 DESIGN AND EXECUTE | Outcome-based delivery

Crossfuze AI RunState 12 MONTHS

- **Plan** An AI Action Plan sets the direction
- **Prioritise** Backlog cycles decide what comes next
- **Ship** Extend delivers it, in 90-day cycles

Clear next steps in 90 minutes. Outcomes every 90 days.

What could better IT look like for us?

THE DESTINATION

Service Desk	Tech Operations	Asset Management	CISO	Strategy & Planning
OWNER	OWNER	OWNER	OWNER	OWNER
0	0	0	0	0
Touch Support	Service Outages	Asset Issues	Severe Breaches	Misaligned Investments

ALL FIVE REST ON

DATA · AI AND AGENTS · WORKFLOWS · GOVERNANCE

> **Zero support incidents, zero outages, zero asset issues, zero breaches, and zero misaligned investments:**
>
> **five outcomes on one connected platform.**

Jeff Hausman

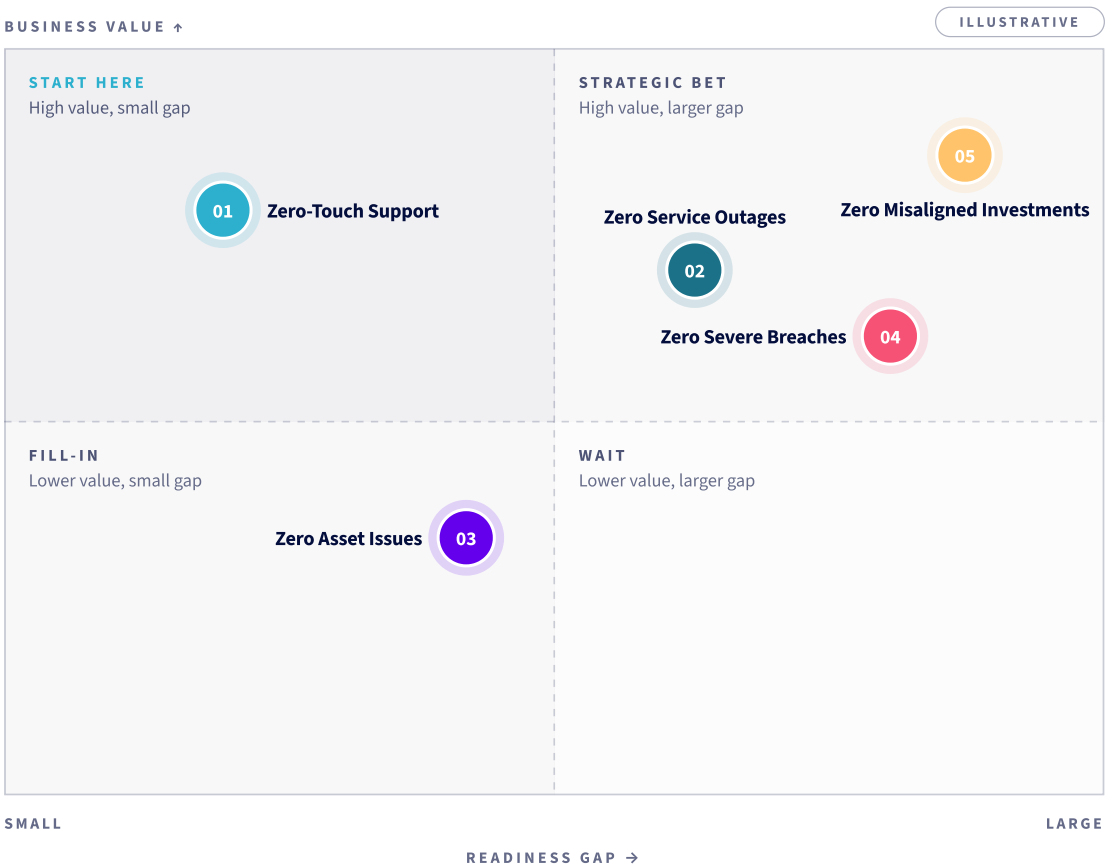

EVP & General Manager, Technology Workflows, ServiceNow

THE DECISION

Which Zero should we tackle first?

There is no universal first Zero. Plot each outcome against the value it could create and the readiness gap standing in front of it. **Start where value is high and the readiness gap is smallest. Everything else is sequencing, not rejection.**

THE FIVE ZEROS, PLOTTED

Positions illustrative until scored. Use your readiness evidence for the horizontal axis and your business case for the vertical axis.

01 **Zero-Touch Support** · often an accessible starting point

02 **Zero Service Outages** · high operational value, deeper engineering dependency

03 **Zero Asset Issues** · can strengthen shared foundations

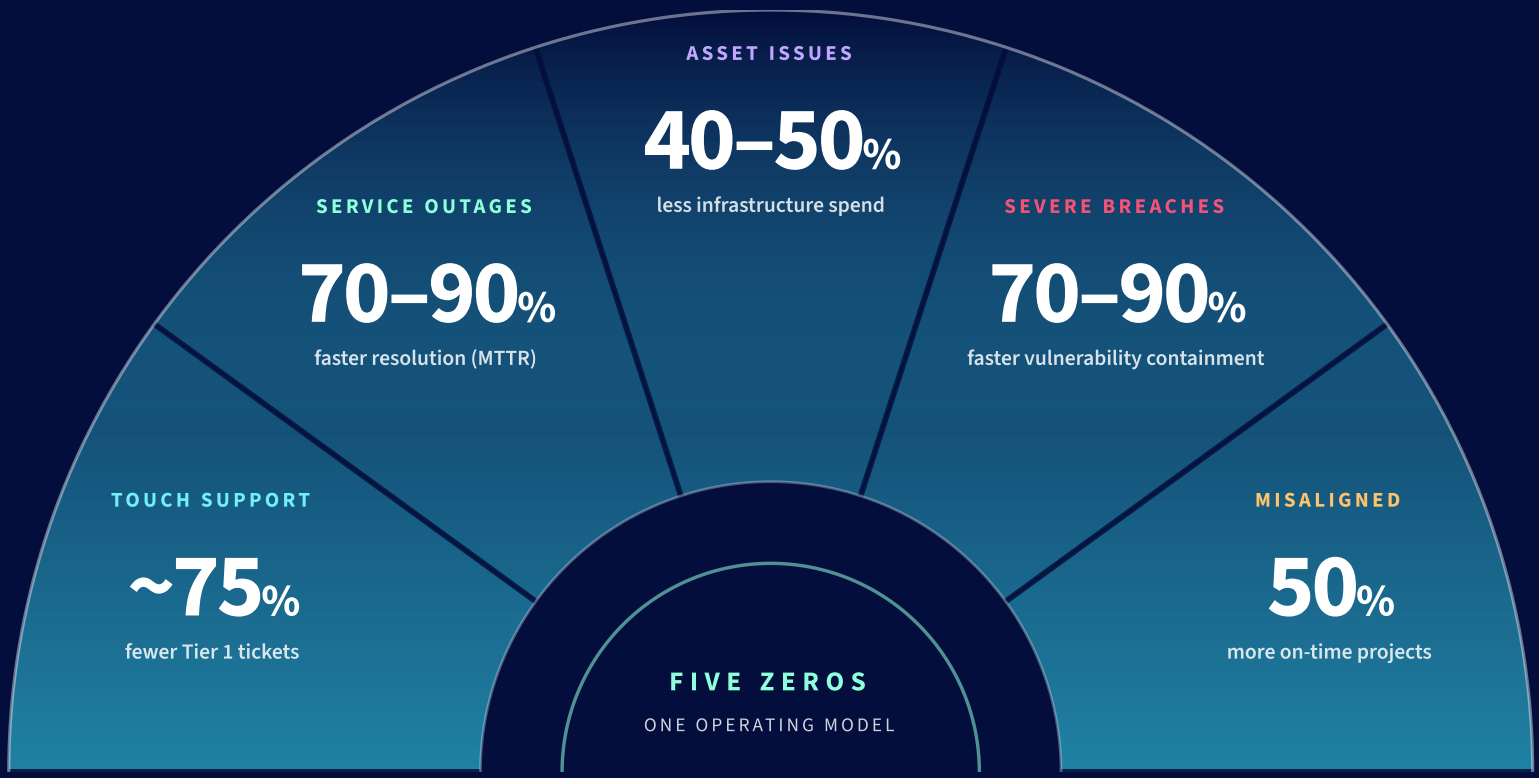

04 **Zero Severe Breaches** · control and governance matter as much as capability

05 **Zero Misaligned Investments** · potentially high strategic value, dependent on connected evidence

THE PRIZE

What could each Zero be worth to us?

Each Zero carries a measurable operational outcome. **These are ServiceNow's published estimates, before we look at your evidence.**

AUTONOMOUS IT · FIVE OUTCOMES · SHARED FOUNDATIONS

WHAT THE NUMBERS MEAN

These are ServiceNow business-value estimates, not five independently audited customer outcomes. Source: ServiceNow, 'Autonomous IT: Where zeros make heroes' · 2026 (vendor-published). 'Numbers listed are estimates based on known customer outcomes and business value assessment projections. Your results may vary.' (ServiceNow)

PREPARING FOR THE AUTONOMOUS ENTERPRISE

Autonomy is earned.

“

AI makes execution easier. Trust becomes the harder problem.

You prove the data can be trusted. You prove the workflow behaves as expected. You prove the controls work. Then you expand the boundary. **Permission to automate is earned.** ”

Oliver Nowak
AI Practice Lead
CROSSFUZE

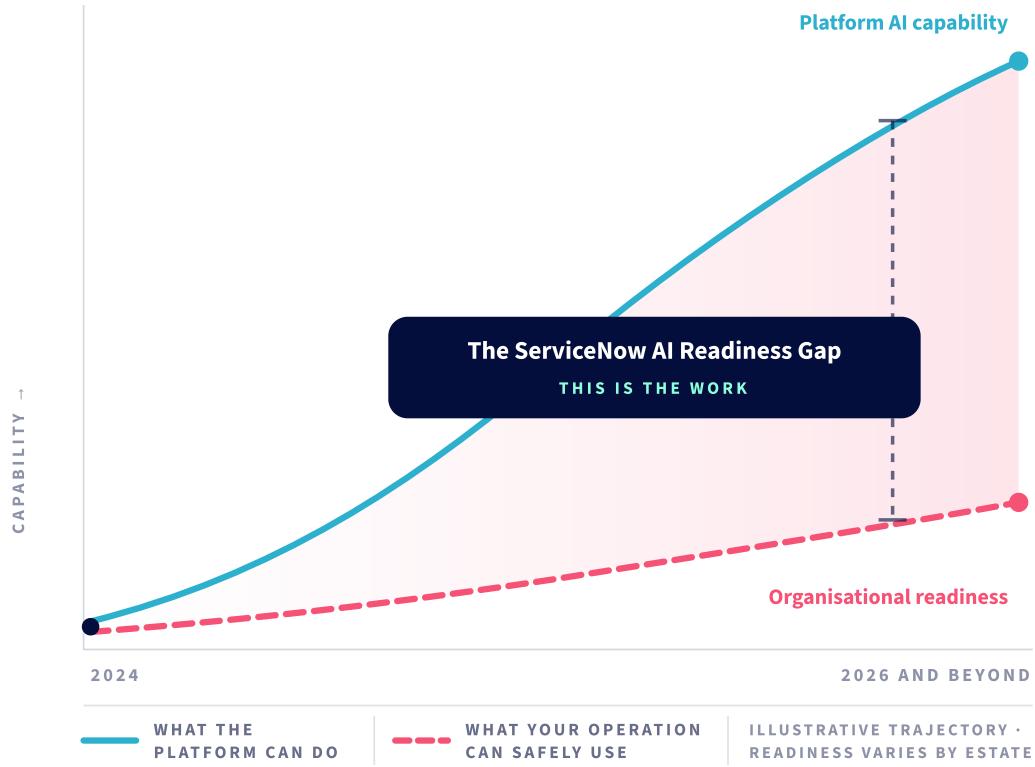

Crossfuze helps you decide what AI is ready to do.

YOUR SERVICENOW AI READINESS GAP

What's stopping us from letting AI do the work?

Can we trust the data, rely on the workflow, control the action and justify the consumption?

EXHIBIT 01 · THE EXECUTION GAP

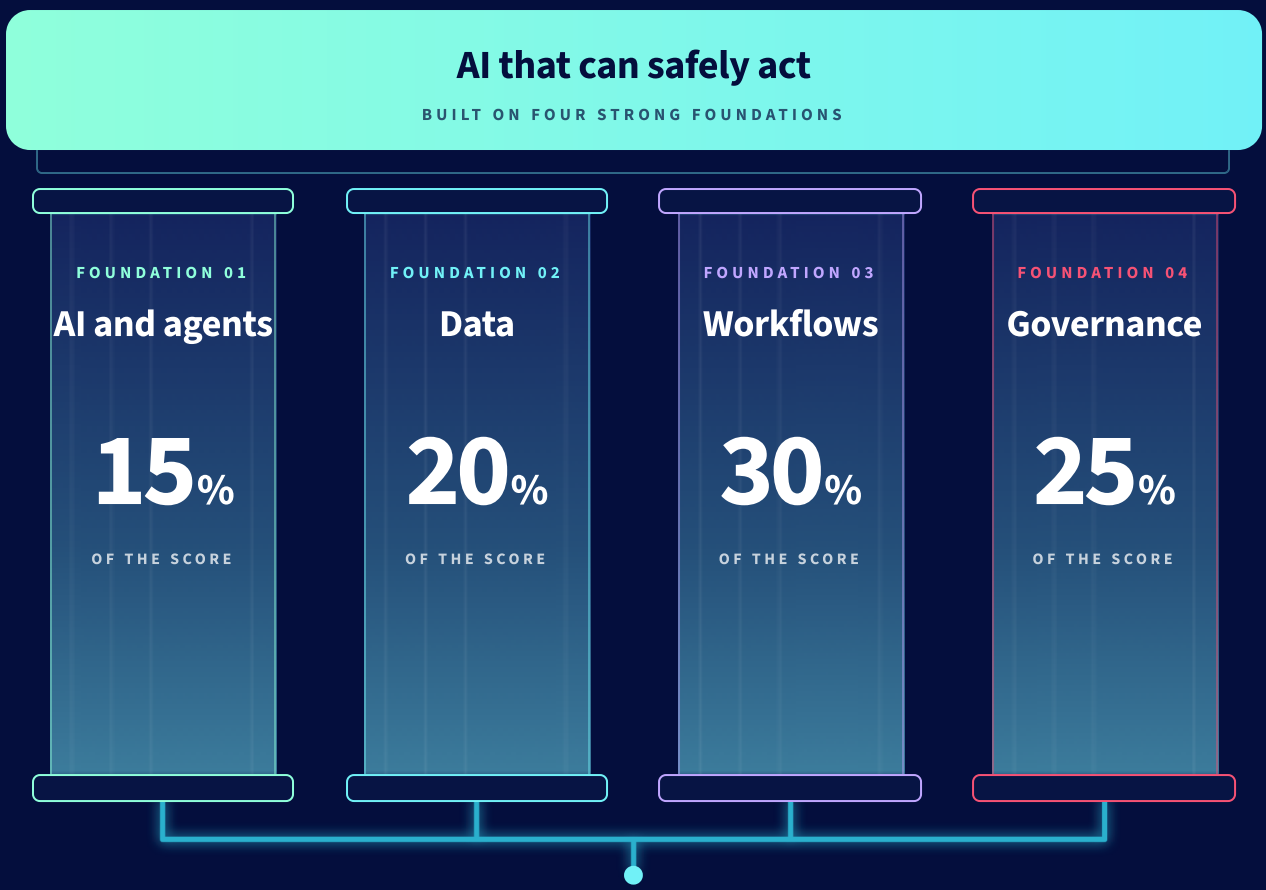

ServiceNow AI is ready. The question is whether you are.

Crossfuze assesses readiness across the foundations of data, AI and agents, workflows and governance to identify what must change before autonomy can safely increase.

Open the tools →

THE FOUR FOUNDATIONS

What does AI need to stand on?

AI can only act on what sits beneath it.

Your weakest foundation sets your autonomy ceiling.

Named people remain accountable.

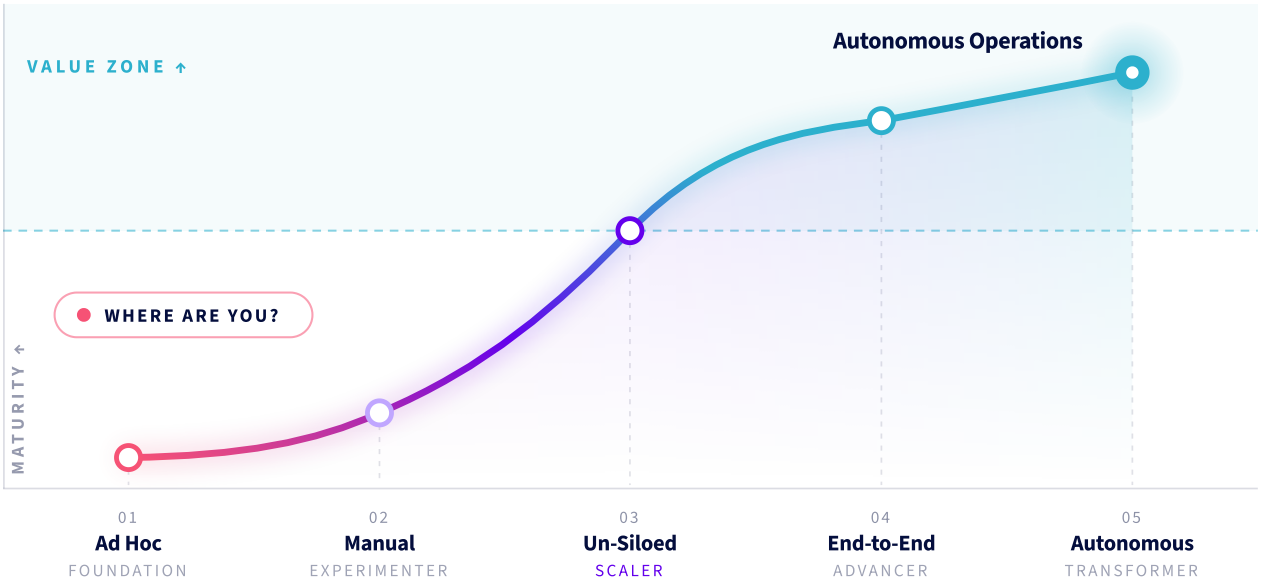

Weights are each foundation's share of the seven-dimension readiness score on page 12; dimension 06, platform and entitlement (10%), is assessed per Zero.

YOUR MATURITY

How ready are we?

ServiceNow's Enterprise AI Maturity Index gives the direction. **Our evidence determines where our AI readiness actually sits on the five-stage path to greater autonomy.** Autonomy becomes practical at stage 03, and each stage is earned by lifting your weakest foundation.

THE READINESS JOURNEY — AUTONOMY BECOMES PRACTICAL AT STAGE 03

01 Ad Hoc · FOUNDATION	02 Manual · EXPERIMENTER	03 Un-Siloed · SCALER	04 End-to-End · ADVANCER	05 Autonomous · TRANSFORMER
AI in isolated pockets. Data untrusted, work manual, and no one owns what AI does.	Pilots and assistants in places. Foundations patchy, so a person still checks every AI action.	Foundations connected across teams. Work redesigned so AI can start to act within limits.	Agentic workflows run end to end in production, with owners and controls.	AI predicts, decides and resolves by default. People set the limits and own outcomes.

Crossfuze readiness scale. Stages 02–05 align to the Experimenter, Scaler, Advancer and Transformer stages of the ServiceNow Enterprise AI Maturity Index 2026. The Five Zero outcomes and the Autonomous IT ambition are ServiceNow's. The readiness scale is Crossfuze's.

READY TO PLACE YOURSELF? **Take the ServiceNow AI Readiness tool →**

THE SCORE

Can we trust the score?

Every AI decision starts with an AI Readiness score. Each dimension is scored against evidence, weighted, and shown with its status, so nobody has to take the number on trust.

SEVEN WEIGHTED DIMENSIONS

01	**Data quality** DATA Reliable fields, records and classifications		20%
02	**Process determinism** WORKFLOWS Decisions, exceptions and rollback understood		15%
03	**Knowledge and content** AI AND AGENTS Approved, current content to ground answers		15%
04	**Workflow and integration** WORKFLOWS The technical estate can run the work end to end		15%
05	**Governance and security** GOVERNANCE Access, approval, monitoring and stop controls		15%
06	**Platform and entitlement** ESTIMATOR Package and Assist allocation fit the plan		10%
07	**Ownership and adoption** GOVERNANCE Named owners, real users, capacity to measure		10%

FIVE ANCHORS, NOTHING IN BETWEEN

0	3	5	8	10
None	Weak	Mixed	Strong	Direct

Every score has to be argued from evidence.

EVERY FINDING CARRIES A STATUS

Observed	Calculated	Inferred
Assumed	Validated	Corrected

The wording of each finding matches its status.

GAPS STAY VISIBLE

Full	100% of the weight evidenced
Provisional	At least 80%, including every 20% dimension
Unavailable	Otherwise

Missing evidence is never scored as zero.

The score decides what happens next.

Not ready
Fix the limiting foundation first, then reassess.

Ready
Design the roadmap for the chosen use case. Confirm the required controls before autonomous action.

Crossfuze AI Readiness Assessment method. Incomplete findings remain provisional and may need technical validation.

THE BILL

What will AI cost us as it scales?

The agentic cost paradox. The more AI does, the more it consumes. Readiness decides whether that consumption turns into value or into an unplanned bill.

THREE PACKAGES

AI IS INCLUDED AT EVERY LEVEL

Foundation

ASSISTED
Summarisation, categorisation and task-based help.

Advanced

AGENTIC
Agentic workflows that understand context and automate a whole process.

Prime

AUTONOMOUS
Custom AI specialists and agents that make decisions with role-based expertise.

Open the Assist Estimator →

HOW ASSISTS SCALE

CONSUMPTION FOLLOWS THE WORK, NOT THE SEAT

25	Assists for a narrow run, 0 to 4 tools
50	Assists for a run of 5 to 8 tools
150	Assists for a wide run, 9 to 20 tools: 6× a narrow run

CROSSFUZE VIEW

We model what your chosen outcome may consume before you commit.

Book your session →

Sources: ServiceNow New Commercial Model Overview, April 2026; ServiceNow assist-consumption guidance, 2026. Entitlements vary by product and package. Assists and Data Fabric credits are separate meters. Total consumption depends on run volume and mix.

THE OFFER

How do we get started, and keep going?

One 12-month engagement. Plan once, prioritise every quarter, ship every month.

01 PLAN · ADVISORY | Month 1 · about 8 weeks

Oliver Nowak
with Crossfuze Advisory

AI Action Plan
Workshops, use cases, roadmap

Second review
Month 7, reset the plan

02 PRIORITISE · EVERY QUARTER | About 6 weeks each

Backlog Cycles

- Requirements reconciled
- Stories ready to build
- Effort and dependencies
- Three-month capacity plan

4 CYCLES

03 SHIP · EXTEND | 80 hours a month · 9 months

Extend Services TECHNICAL LEAD

- **Build** Enhancements and new capability
- **Run** Administration, defects and support
- **Prove** Hours tracked, reviewed before acceptance

12 MONTHS

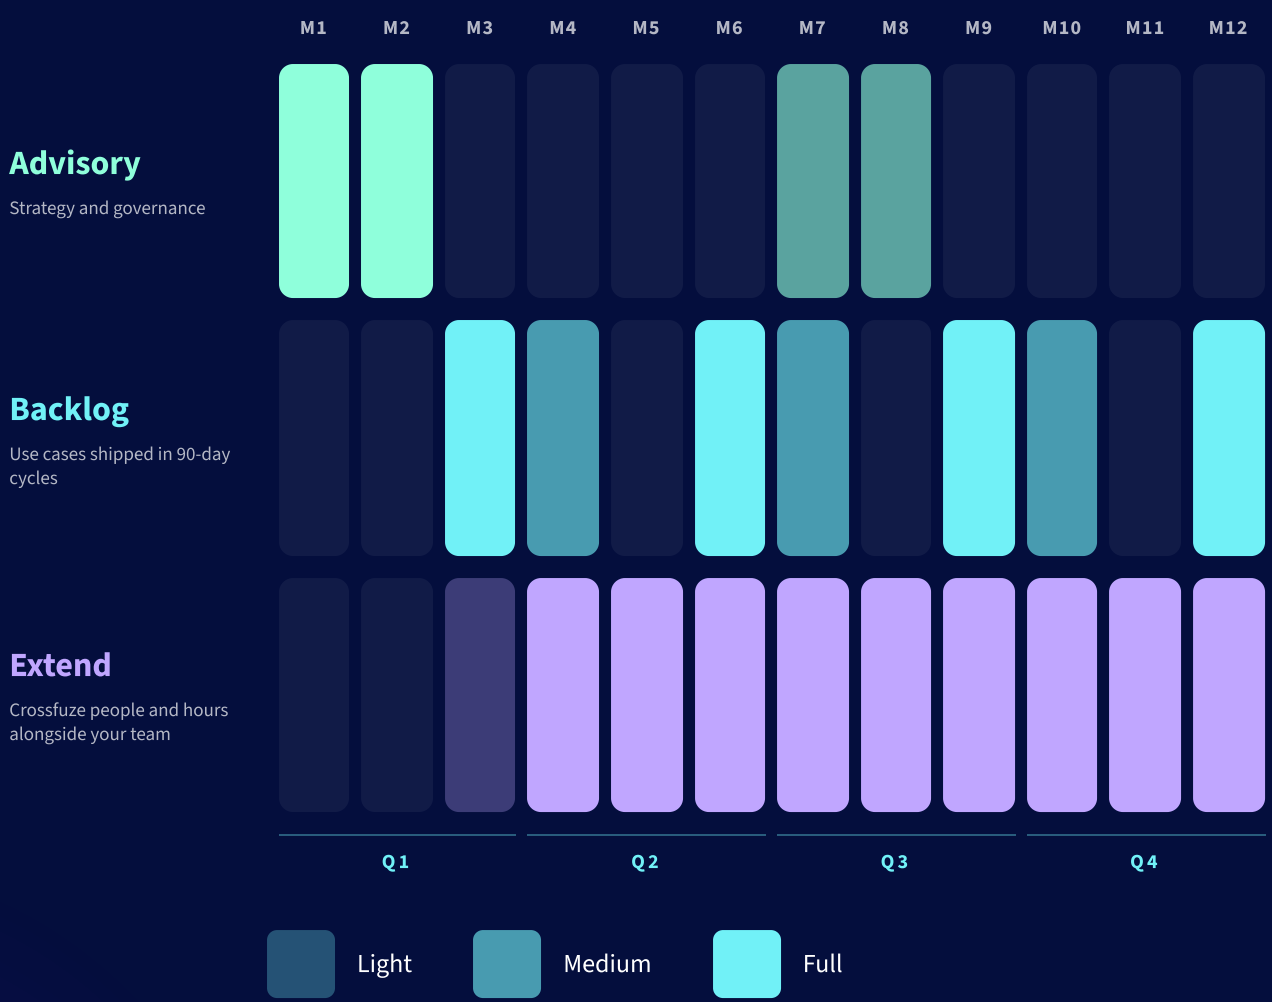

You own the priorities. We ship the outcomes.

Indicative structure. Scope, workshop numbers and hours are confirmed in your statement of work.

THE FIRST 12 MONTHS

What does our first year look like?

Where the team effort sits each month, and why capacity stays steady. Advisory front-loads the strategy, the backlog ships in 90-day cycles, and Extend carries the run.

One engagement. The effort moves to where the value is.

Illustrative 12-month profile. Actual effort is shaped by your AI Action Plan and the use cases you prioritise.

TAKE THE FIRST STEP

What's our next step?

Book 90 minutes with the Crossfuze AI practice. Or start on your own with our interactive tools. Both cost nothing.

OPTION 01 · WITH CROSSFUZE · NO COST

RECOMMENDED

Book a 90-minute session.

The AI Readiness Assessment, facilitated by the Crossfuze AI practice.

- **See where you stand**
  Your readiness across the four foundations.
- **Choose your first Zero**
  Where value is high and the gap is smallest.
- **Know what it may consume**
  Usage assumptions for the Zero you choose.

Led by Oliver Nowak
AI Practice Lead, Crossfuze

SCAN TO BOOK

Book your session →

90 minutes · no cost · no commitment

OR

OPTION 02 · SELF-SERVE · NO COST

Use our interactive tools.

A quick readiness baseline, in your own time. About ten minutes.

1. **ServiceNow AI Readiness**
   Are we ready? Scores the foundations and places you on the readiness scale.
2. **ServiceNow Assist Estimator**
   What might it consume? Indicative 12-month Assist forecast.

Self-guided
Crossfuze interactive tools

Open the tools →

crossfuze.com/interactive-tools

YOU LEAVE WITH A VIEW OF

- Your readiness
- Your likely starting Zero
- Usage assumptions
- The next 90 days

Autonomy is earned.

Start by knowing where you stand.

Every step towards Zero is capacity returned to the team.
Not people-free. Friction-free.

Book your session → **Open the tools →**

90 minutes · No cost · Clear next steps

Next on the road: **The Road to Zero**, a practical guide to Autonomous IT on ServiceNow.
